aremesar@gmail.com

Abstract

Piotrkowska street is the centre of Łódź. A continuous axis of more than 4 km that runs through the territory from north to south. A long shopping street divided into two clearly differentiated sections. The first from Wolności Square to Centrum Piotrkowska (approx. 2km and cross section between 16 and 24m). The second from Centrum Piotrkowska to Niepodległości square (approx 2.2 Km and cross section between 25 and 30m). From the very beginning, the street was the central axis around which the city was developing, and its development spontaneously gave the present shape to its centre.

In the second section of the street, trams circulate and, despite having some important heritage facilities such as the “White Factory”, the former headquarters of the Karol Scheibler industries and today the headquarters of the Central Textile Museum, it does not have the recognition that the first stretch.

The first section of the street is the one that appears in all tourist guides, is the commercial and cultural heart of the city, a favourite meeting place for Łódź residents and tourists. Here festivals, concerts, sporting events, parties and fairs take place.

Piotrkowska street still is flagship of the urban regeneration processes in Łódź, along with Manufaktura, and the mega urban regeneration project Nowe Centrum, with the city’s new central station, the EC1 cultural complex, and the expansion of the University of Łódź campus. Territory in which the Expo 2022 was to be developed, which will finally be held in Buenos Aires.

Piotrkowska’s urban regeneration process clearly incorporates a public art strategy. The particularity of this strategy lies in its contents, specifically those who propose, manifest or emphasize the “pride of the city”.

Keywords: Piotrkowska street; Lodz; Urban Regeneration; Public Art
Resumen
La calle Piotrkowska es el centro de Łodż. Un eje continuo de más de 4 km que atraviesa el territorio de norte a sur. Una larga calle comercial dividida en dos secciones claramente diferenciadas. El primero desde la plaza Wolności hasta Centrum Piotrkowska (aprox. 2 km y sección transversal entre 16 y 24 m). El segundo desde Centrum Piotrkowska hasta la plaza Niepodległości (aprox. 2,2 km y sección transversal entre 25 y 30 m). Desde el principio, la calle fue el eje central alrededor del cual se desarrolló la ciudad, y su desarrollo dio espontáneamente la forma actual a su centro.

En la segunda sección de la calle, circulan los tranvías y, a pesar de tener algunas instalaciones patrimoniales importantes como la “Fábrica Blanca”, la antigua sede de las industrias de Karol Scheibler y hoy sede del Museo Textil Central, no tiene el reconocimiento que el primer tramo.

La primera sección de la calle es la que aparece en todas las guías turísticas, es el corazón comercial y cultural de la ciudad, un lugar de encuentro favorito para los residentes y turistas de Łódż. Aquí se realizan festivales, conciertos, eventos deportivos, fiestas y ferias.

La calle Piotrkowska sigue siendo el buque insignia de los procesos de regeneración urbana en Łódż, junto con Manufaktura, y el mega proyecto de regeneración urbana Nowe Centrum, con la nueva estación central de la ciudad, el complejo cultural EC1 y la expansión del campus de la Universidad de Łódż. Territorio en el que debía desarrollarse la Expo 2022 que finalmente se celebrará en Buenos Aires.

El proceso de regeneración urbana de Piotrkowska incorpora claramente una estrategia de arte público. La particularidad de esta estrategia radica en sus contenidos, específicamente aquellos que proponen, manifiestan o enfatizan el “orgullo de la ciudad”.

Palabras clave: calle Piotrkowska; Lodz; Regeneración urbana; Arte publico

Resum
El carrer Piotrkowska és el centre de Łodż. Un eix continu de més de 4 km que recorre el territori de nord a sud. Un llarg carrer comercial dividit en dues seccions clarament diferenciades. El primer des de la plaça Wolności fins a Centrum Piotrkowska (aproximadament 2 km i secció entre 16 i 24 m). El segon, des de Centrum Piotrkowska fins a la plaça Niepodległości (aproximadament 2,2 Km i secció entre 25 i 30 m). Des del principi, el carrer va ser l’eix central al voltant del qual es desenvolupava la ciutat i el seu desenvolupament va donar de forma espontània la forma actual al seu centre.

Al segon tram del carrer circulen els tramvies i, tot i tenir algunes instal·lacions patrimonials importants com la “Fàbrica Blanca”, antiga seu de les indústries de Karol Scheibler i avui seu del Museu Central del Tèxtil, no té el reconeixement que té el primer tram.

El primer tram del carrer és el que apareix a totes les guies turístiques, és el cor comercial i cultural de la ciutat, lloc de trobada favorit dels residents i turistes de Łodż. Aquí hi tenen lloc festivals, concerts, esdeveniments esportius, festes i fires.

El carrer Piotrkowska segueix sent insígnia dels processos de regeneració urbana de Łódż, juntament amb Manufaktura, i el mega projecte de regeneració urbana Nowe Centrum, amb la nova estació central de la ciutat, el complex cultural EC1 i l’expansió del campus de la Universitat de Łódż. Territori en el que hauria de desenvolupar-se l’Expo 2022 que finalment es celebrarà a Buenos Aires.

El procés de regeneració urbana de Piotrkowska incorpora clarament una estratègia d’art públic. La particularitat d’aquesta estratègia rau en els seus continguts, concretament en aquells que proposen, manifesten o posen l’èmfasi en el “orgull de la ciutat”.

Paraules clau: carrer Piotrkowska; Lodz; Regeneració Urbana; Art públic
Piotrkowska street, axis of Łódź’s urban growth

As a monolith reminds us, that initially, Piotrkowska Street was a route tract leading from Łódź to Piotrków Trybunalski in the south and to Zgierz and Łęczyca in the north. The classic city centre with a market, shops and the amenities of public life focused around it never took shape in Łódź1.

Piotrkowska Street has assumed this role with time.

“The spatial structure of an industrial city was shaped in the form of belts of settlement that became nodes initiating the later filling-in of urban space with built-up areas. The development was regular, dispersed and monotonous, and the structure (still readily discernible) ensured that for decades Łódź was known for its elongate North-South shape, as well as a unique centre running along what is today Piotrkowska Street for as many as 4 km, plus a checkerboard pattern of intersecting streets”. (Wójcik, M, Tobiasz-Lis, P, & Dmochowska-Dudek 2018)

In 1821, Rajmund Rembieliński - president of the Mazowieckie Voivodship Commission - began activities aimed at regulating the factories settlement. This settlement was called the “New Town” and it was located south of the “old” Łódź. On the settlement plan, a route line was marked, along which there were blocks and standard single-plots, 17.5-21m wide, assigned to weaving craftsmen. The plot allocation depended on the type of production declared. The period of “craftsmen” quickly ended when factories were established on the outskirts of the New Town that took over craft production. After 1863 and the liquidation of local government bodies, Łódź’s urban planning ceased and the city began to expand spontaneously.

The Piotrków Route in the “new” Łódź, since then called Piotrkowska Street, was until 1865 the main communication link between Łódź and Piotrków Trybunalski, which involved horse-drawn passenger and freight traffic using large wagons and stagecoaches. At the same time, the tract played the role of an internal road connecting individual workshops of weaving craftsmen of various specialties, listing their semi-finished products, and focusing the internal life of the emerging industrial city. Therefore, Piotrkowska Street was a kind of internal courtyard and market square for the great “Łódź manufacture”, which was the whole New Town. This function is explained by the fact that a classic city centre with a centrally located market and co-expanding commercial and public institutions was never formed in Łódź, and its tasks were taken over by ul. Piotrkow.

Originally (around 1815) the name “Piotrkowska Street” was used for the northern part of the road connecting the then Old Market Square and the New Market Square, i.e. today’s ul. Nowomiejska, the initial section of ul. Zgierska and pl. Kościelny - while the southern section (today’s ul. Piotrkowska) had no name. Soon, however, the name “Piotrkowska Street” was given to the entire section of the Piotrków Route, which ran in the newly founded craft settlement, i.e. in the New Town. This name was given by the mayor of the Old Town, Antoni Czarnkowski, and builder of the Łęczyca region, Dürring. In 1823, tablets with this name were erected, and five years later the name was confirmed in a government letter and applied to the settlement plan.

1.- Piotrkowska Street and the centre of the city, would correspond to the form of urban growth that Solà-Morales calls “suburban growth” (Solà-Morales, Manuel 1993)
In the second half of the nineteenth century large modern enterprises began to emerge, including plants owned by Karol Scheibler, Israel Poznanski and Ludwik Grohman. At the end of the century, Łódź became the largest industrial centre in Poland. Piotrkowska Street was definitely developed. In 1887, the Grand Hotel was opened, designed by Hilary Majewski (originally a wool and cotton factory owned by Ludwik Meyer). In 1888, the Victoria Theatre was inaugurated, later transformed into cinema “Poland”. The large industrialists also developed real estate projects. Some linked to the construction of palaces for their own residence, others boosting apartment buildings and offices.

Piotrkowska Street was a place of prestige, the plots were much more expensive here than in the outskirts. This resulted in the large density of villas and palaces for businessmen in the city, buildings between party walls and public buildings in various architectural styles, such as the Neo-Renacentist Palace of the factory owner, Juliusz Heinzel; the printer’s property and founder of the first newspaper in Łódź, Johann Petersilge; The palace of one of the largest industrial companies in Łódź, Karol Scheibler or the palace of the industrialist Juliusz Kindermann.

Many pioneering actions in the history of the city are related to Piotrkowska Street. It was here when the first brick house was built in 1835. In 1869, the Łódź Society of Gas installed the gas lighting for the first time. In 1876 the first stone pavement was placed, called cobblestones along the entire length of the street, and the 1898 the first electric tram stepped on this street.

With the German occupation in 1939 the street and the city lost their name. The street was renamed Adolf Hitler and Łódź to become Litzmannstadt. On 11 April 1940, Łódź disappeared from all maps. The city of Litzmannstadt appeared in its place, named in honour of General Karl Litzmann, a Prussian general, the hero of the Battle of Lodz (First World War). They disappeared from the map as so did the thousands of Jews confined in Litzmannstadt’s ghetto. It was the second largest ghetto after Warsaw. It was originally intended as a point of concentration of the Hebrew population, eventually becoming an important industrial centre, providing supplies for the German war machinery. Due to its extraordinary productivity, the ghetto managed to survive until August 1944, when the remaining population was deported to Auschwitz, being the last ghetto in Poland. It was closed on 19 January 1945 with the arrival of the Soviet Army.

From 1945 the street suffered a gradual degradation, although, in 1950, the trams and routes of the tramway move to Tadeusza Kościuszko Avenue, which runs parallel to Piotrkowska, with the intention of relieve it.

Until the 1970s the historic buildings of the street were not considered monuments worthy of being preserved by the authorities of the time. Several of them were demolished and instead office buildings and shopping centres were built. In the 1980s some decorative elements were removed from the facades, dangerous to passers-by, although the restoration of some buildings had already begun.

Since 1990 the character of the street starts to change. This year, Marek Janiak, architect and member
of the art group Lodz Kaliska, proposed the idea of creating the “Foundation of Ulica Piotrkowska”. The aim of the Foundation was to revitalize the street and transform it into a pedestrian zone. A first section was paved with colourful cobblestones and was equipped with modern street lamps and other elements of urban furniture. This intervention was harshly criticized by art curators and historians because it did not adapt to the general street atmosphere. Between 1993 and 1997, the following sections of the street were renovated and pedestrianized in a northerly direction towards Wolności [Freedom] square. They were paved with black cobblestones that mimicked the old pavement and equipped with more elements of urban furniture. However, each part had a different pavement and urban furniture of different style, which was also criticized.

The definitive reconversion of the street begins with the approval of “Development Strategy of Piotrkowska Street in Łódź for the years 2009-2020”. The Development Strategy of Piotrkowska Street was created because the Łódź residents clearly stated that Piotrkowska needed it, Łódź needed it.

The inhabitants of Piotrkowska themselves, its users and supporters, together with the city authorities, through public consultations, which were held in the form of meetings of the Piotrkowska Staff appointed by the Mayor of the City, agreed its shape and tasks.

The effects of the Piotrkowska Staff were adopted in the form of a social contract under the name ‘Piotrkowska Contract’. Parallel to the work of Piotrkowska Staff, marketing research was carried out on the street in order to objectify the current situation and accurately define the development policy for Piotrkowska. As the introduction of the document points out

“Dear Lodzians, Dear Lodzians, nothing stands in the way of adding Pietryna to the pantheon of the most famous streets in the world. Because what is Piotrkowska worse than Parisian Champs Elysées, Barcelona’s La Rambla, London’s Oxford Street, or New York’s Broadway? It is in no way inferior to them, what is better, because ours. Restoring the glow of Piotrkowska Street is our duty, which we cannot only achieve, but must fulfil” (Rady Miejskiej w Łodzi 2009).

Piotrkowska is the centre of the Łódź metropolis. Lodzians work here, live, study and relax. Therefore, everything should be done to restore the former splendour of the street and at the same time breathe the spirit of new times into its space. It should be clearly stated that Piotrkowska Street, does not compete with other existing or planned complexes that perform similar functions in Łódź. Łódź is a big city, and its inhabitants need places of diverse nature that will focus the city’s cultural, entertainment and business life.

It should also be noted that from January 1, 2012, Piotrkowska was subject to thorough modernization and reconstruction. The adopted solution assumes that the floor surface along the entire width of Piotrkowska is one plane (without curbs). Thus, there is no intention in which part of the road lane would be separated as a roadway. In addition, at least in two locations, i.e. at the intersection of Piotrkowska with Roosevelt street motion separators will be introduced in the form of movable posts.
Łódź Urban Regeneration Strategies

The strategy for Piotrkowska represents a turning point in the local development of Łódź. The political regime change in Poland in 1990 coincides with a deep economic crisis that has a major impact on the economic base of the city with the practical disappearance of the textile industry that for 150 years was the basis of its urban development. Łódź is facing, as before with other cities such as Barcelona (Bohigas, Oriol 1985; Borja, Jordi 1988; Borja, Jordi (ed) 1995, a deep reconstruction process in which specific “small-scale” (El Haddad, Marie 2017) interventions must be combined with large projects for comprehensive regeneration (Hernando, Mateo; Remesar Aguilar, Nemo A. 2011; Remesar Aguilar, Nemo 2016, Remesar, Antoni 2019). As in other European cities, Poland’s entry into the European Union (2004) will allow for scale-up operations thanks to the receipt of European financial funds.

Łódź it is one of the fastest shrinking cities in Europe due to the economic crisis in the 1990s following the systemic transformation in Poland and in other CEE countries.

The reasons for the shrinking of the city cannot be attributed to the economic and demographic situation alone but also to the degradation of the central part of the city and low quality of housing available in the nineteenth century buildings in the area. The overall image of Łódź as a city in crisis, which prevailed for many years after the collapse of its industry, resulted in low investment attractiveness compared to other large cities in Poland. (Kazimierczak J. & Kosmowski P. 2017)

Population data express very well the “decline” of the city. In 1990 Łódź had about 900.00 inhabitants. Thirty years later it did not reach 700,000 and the City Council forecast for 2050 places the city’s inhabitants below 500,000.

While Barcelona, for its reconstruction, opted for a dialectical “centre - periphery” strategy that gave rise to the so-called “Barcelona Model” (Borja, Jordi (ed) 1995; Capel, Horacio 2005; Monclús, Fco. Javier 2003; Montaner, J.M.- Alvarez, F - Muxí, Z (ED) 2011; Remesar, Antoni 2013), Łódź opts for a strategy of “reconversion of its centre”. In 2005 the city buys the old power plant known as EC1; in 2006 it reached an agreement with PKP (Polish Railway) to reconvert the Fabryczna central station, very close to EC1, with the motto “Station Down, Culture Up”; in 2007 The Nowe Centrum Łodzi program is initially proposed, complemented by the 2012 Integrated Development Strategy for Łódz 2020+ (ZLPR), which will be complemented in 2013 with the Łódz 2020+ Spatial Development Strategy and Culture Development Policy 2020+ for the City of Łódź (MPZP). Esta estrategia facilita que Łódź presente su candidatura, 2015, para celebrar en 2022 una Exposición Internacional con la temática “City Re-Invented”. This strategy facilitates Łódź to present its bid, 2015, to host in 2022 an International Exhibition with the theme “City Re-Invented”. Finally, the Bureau International des Expositions (BIE) opts to choose the city of Buenos Aires to host the exhibition with the theme “Creative industries in Digital Convergence”.

The territorial development of Łódź in context of contemporary functional structure
Source: Wójcik, M, Tobiasz-Lis, P, & Dmochowska-Dudek 2018
Kaczmarek & Marcinczak pointed to a number of particularities that condition urban revitalization projects in Poland. According to these authors, the implementation of these projects had to deal with the following impediments:

1.- The lack of a restitution act, especially in cities that had a multi-ethnic structure before the Second World War, such as Łódź or Krakow, means that many plots.

2.- The absence of an urban regeneration act, a regulation that would support the revitalization of inner districts, further exacerbates the problems of the redevelopment of those areas.

3.- The absence of a cadastral system contributes to the piecemeal redevelopment of city centres (Kaczmarek, Sylwia & Marcinczak, Szymon 2013)

Seven years later, part of these conditions can be considered overcome at this time. In 2014-2015, the Ministry of Infrastructures and Development has prepared the main cases of the National Revitalization Plan (NDP). At its base, a package of systemic solutions that will make the revitalization completer and more effective; in 2016 happens the designation of a degraded area and the regeneration area of the city of Łódź and next year setup a Special Revitalization Zone in the area of revitalization of the city of Łódź.

Regarding to cadastral system the city of Łódź has developed an interesting programme, with the aid of European Funds, in order to manage the plots in the city, including the 3D restauration. The main objective of the project is to increase the use of information and communication Technologies (ICTS) in economic and social activities in the city of Lodz, in order to:

- Provide spatial public information for reuse,
- Implementation of new electronic services for entrepreneurs and public institutions,
- Launching of an electronic control system for the municipal revitalization programme of

the owners of privatized flats and/or plots who do not want to participate in redevelopment can easily stop the process. According to the Polish planning regulations, one’s property can only be expropriated when it is necessary for strategic public investments such as highways, railways and pipelines. Consequently, local government does not have any powers to force such owners either to participate in the process, or to expropriate them.

As a result, the project will contribute to increase the level of integration and coordination of public policies by providing computer tools to supervise and analyse the indicators and execution activities of the project carried out in the revitalization area of the city of Łódź.

The idea of this set of projects articulated in the regeneration strategy aim to unlock the potential of the centre of Łódź for its inhabitants correcting the deficit of social cohesion, improving the image of the area, recovering the economy and overcoming the residential crisis.

**Urban Regeneration Megaproject (URMP), implementing the Nowe Centrum Łodzi project (2007) over the years 2013–2016.**

**Source: Kazimierczak J. & Kosmowski P. (2017)**
Analysing this strategy, it is surprising the importance of aspects of “urban aesthetics” (Gralinska-Toborek, Agnieszka- Kazimierska-Jerzyk, Wioletta 2014; Remesar, Antoni 2016; Kazimierska-Jerzyk, W. 2015; Kazimierska-Jerzyk, W. 2019). Changes in the aesthetics of space seem crucial, with green cuts and planting street vegetation and small vegetation enclaves (for example, pocket parks), which can change radically (enrich or impoverish) urban space. Also regarding the empowerment of heritage aspects (conservation and restoration, information) and symbolic (public art programs) and monuments.

**Urban Regeneration Strategy for Piotrkowska Street**

*The Development Strategy of Piotrkowska Street in Łódź for the years 2009 2020 was built using the environmental method. It was created because the Łódź residents clearly stated that Piotrkowska needed it, Łódź needed it. The inhabitants of Piotrkowska themselves, its users and supporters, together with the city authorities, through public consultations, which were held in the form of meetings of the Piotrkowska Staff appointed by the Mayor of the City, agreed its shape and tasks. Staff Piotrkowska effects work have been adopted in the form of social contract entitled “Contract for Piotrowska”. Parallel to the works of Piotrkowska Staff, marketing research was carried out on the street in order to objectify the current situation and accurately determine the development policy for Piotrkowska. The Piotrkowska Street Development Strategy in Łódź for the years 2009-2020 is a document that reflects both the tasks specified in the “Piotrkowska Contract” and the conclusions of the study, while maintaining the form of a strategic document. (Rady Miejskiej w Łodzi 2009)*

Strategic planning, despite the criticism it has received (Arantes, C - Vainer, C - Maricato, E 2002), is a common tool in city planning since the early 1980s. The plan sets a goal to achieve: Improving the street in its spatial, social and economic spheres, since Piotrkowska is a showcase of the metropolitan Łódź, a European street with important economic, cultural, tourist and entertainment functions, a friendly place for residents and guests. It is a long-term plan, based on promotion and urban marketing, aimed at generating a positive image emphasizing the character of the central place of Łódź. The main strategic objectives are:

<table>
<thead>
<tr>
<th>Sphere</th>
<th>spatial</th>
<th>social</th>
<th>economic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
<td>Spatial and infrastructural order of Piotrkowska street</td>
<td>Quality of life and social capital of Piotrkowska Street</td>
<td>Economic attractiveness of Piotrkowska street</td>
</tr>
</tbody>
</table>

The strategy as a whole is summarized in the following tables.

The results of this strategy are evident when visiting the street. The preservation of architectural heritage and urban design has been significantly improved and a clear desire to “monumentalize” the street through public art is evident.
Night view of Piotrkowska Street.

Architectural heritage in Piotrkowska

Evangelical church dedicated to the Holy Trinity.

It was built in the years 1826-1828. Its original shape was similar to the magistrate Łódź building on the opposite side. The author of the project was Bonifacy Witkowski. In 1889-1892 the temple was completely re-built according to the design of Otto Gehlig and Hilary Majewski.

Łódź Town Hall

One of the first stone buildings in Łódź, erected in 1827 according to the design of Bonifacy Witkowski. It is the most valuable and oldest monument of classical architecture in Łódź. Stands out a clock given by the entrepreneur Ozorków-Schlösser installed in 1834 by watchmaker Michał Strangos.

The former Hotel Polski

Built in 1835. Originally it was a simple two storey inn designed by Jan Karol Mertsching – the architect of łęczycki region © (Machlański, Piotr 2010) © http://baedekerlodz.blogspot.com/ 2018
Sendrowicz’s Tenement House
Built in 1898 for Izrael Sendrowicz. It was designed by a Łódź architect, Dawid Lande

Scheibler’s Tenement House
Built in 1879-1881 for Karol Scheibler and designed by Hilary Majewski

The former Landau Banking House
Designed by a popular Łódź architect Gustaw Landau-Gutenteger, 1902

“Magda”
Department store well-known in the communist period.

Szmulowicz’s Tenement House
It was designed by Gustaw Landau-Gutenteger and erected between 1903-1904 for Jakub Szmulowicz

Kohn’s Tenement House

Konstadt’s Tenement House

1885

The former “Victoria” Hotel and “Victoria” Theatre

1876 © (Machłański, Piotr 2010)

Grand Hotel

The building previously served as Ludwik Meyer’s factory, it was re-adapted as a hotel in 1912–1913 according to a project by Hilary Majewski and Dawid Lande.

The Gutenberg Tenement House

The building was named after a sculpture of Johannes Gutenberg, the inventor of movable type printing, placed in a niche in its bay. The house replaced the former home of Filip Lisner. It was constructed in 1896 and 1897 for Jan Petersilge – lithographer, printer and issuer of the first newspaper in Łódź: „Lodzer Anzeiger – Advertisements from Łódź”.

Former House of the Assembly of Master Weavers

Originally it was a one storey brick house with a hipped-gabled roof covered with tiles. It served as a meeting place for master weavers, members of the most prominent professional guilds in the city. The building was designed by Ludwik Bethier and erected in 1839. The date 1892, visible in a cartouche over the soft arches of the corner tower – symbolises the year when Emil Schmechel opened his first shop in a building constructed The present building was erected in the years 1906-1911. The Schmechel Department Store sold goods “for any budget”

Juliusz Heinzl Palace

The palace was designed by Otton Gehlig and erected in 1880. Today the building is used by the Town Hall and Łódź Voivodship Office. © By Kamiladob- Own work, CC BY 3.0

The Schicht family tenement house

The building was designed by a popular architect Gustaw Landau-Gutenteger and erected in 1904 for Mr and Mrs Gustaw and Alwina Schicht.

Juliusz Kindermann’s Palace

Designed by Viennesse architect Karl Seidl, it was built between 1907-1909 © (Machlański, Piotr 2010)

The Krusche and Ender’s firm Tenement

It was designed by Dawid Lande 1898-1899
After the 2012 reform, the street has a single platform cross section, mostly made up of pieces of grey granite of different dimensions and thicknesses. The central road that supports road traffic at some moments, is made up of cobblestones. Pedestrian crossings are marked with a colour change using pavers, which are lighter grey in colour. The space reserved exclusively for pedestrians, is paved with granite slabs. This design generates a stereotomy that provides a spatial continuity to the entire street.

The unique platform is also equipped with the elements that guarantee its use by blind people and accessibility for all. The drainage interfaces are well organized and function as cohesive elements between the different types of pavement.

Regarding urban furniture, we have chosen a solution that we can call “retro”, lampposts, litter bins, tree pits, benches that take us back to previous landscapes and come into contradiction with the paving system. Signage is well designed and organized. There is also a clear desire to control the projection of commercial signs on the air plane, as well as a certain control in their design.

Piotrkowska is a harsh landscape, there are very few trees and the green and flower plantations hang in large baskets from the lampposts.
Public Art

As a great pilot project for the following Urban Regeneration projects, a clear will to “urban aestheticization” is seen on the street, not only through urban design but through various public art interventions.

Public space is structured in four planes:
- that of the ground,
- the vertical (not exclusively of facade);
- the plane of the air and
- the plane that can be called zenital.

The most studied is the horizontal plane, built from infrastructures, elements of urban service (lighting, vegetation, signage, etc.) and interfacing with urban systems (water, electricity, gas, etc.), with the omnipresent elements of paving.

The study of the vertical plane is reduced to the analysis of the facades, although the vertical containment of public space goes beyond the facades. Lodz is a good example of its use Urban Forms.

The plane of the air and the zenith plane are the least studied. The plane of the air unfolds its space between the vertical plane elements and the plane of the ground. While the zenith plane every day takes more strength due to the location of new energy systems (solar panels) and the gradual importance that gardens acquire on the buildings roofs.

---
3. About the definition of the planes of the public space (ground, vertical, air and zenith) we refer to our previous works (Remesar, Antoni 2011; Remesar, Antoni; Ríos, Marien 2018; Ríos Díaz, Marien 2017)
Fountain at Wolności Square (1930 / 2004)

It was built in the 1930s by students of the School of Crafts of the Salesian Society in Łódź. Closed and forgotten for many years, it regained its place in the city thanks to the “Sources for Łódź” project. It was rebuilt with the original elements and with the consent of the city conservator. On July 15, 2004, Łódź Mayor Jerzy Kropiwnicki ceremoniously unveiled the restored fountain.

Monument to Tadeusz Kościuszko (1927/1960)

The decision to build the monument dedicated to Kościuszko was taken in 1917, at a solemn meeting of Łódź City Council on the occasion of the centenary of his death. But work stopped until 1918 when Poland regained its independence.

It was decided that Wolności Square would be located in its current location. In 1921, a competition for the design of the monument was announced, which was decided a year later, but none of the works submitted at that time were enabled for execution. A second competition was announced in 1923, with Zdrowie Park as the monument’s location, which should also be renamed People’s Park.
However, the winning project for Władysław Czapliński was not implemented.

As a result of another competition in 1926, the project was selected Mieczysław Lubelski was selected, the first stone of the monument was laid in May 1927 and the work lasted about 4 years.

In 1940, the Nazis demolished the monument and erected an obelisk decorated with a swastika, at the top of which was a figure of a stylized eagle.

In 1946, a competition for the reconstruction of the monument was announced. Edward Nowicki’s design, which represented the figure of Kosciuszko on horseback, did not, however, gain the approval of the city authorities.

In 1956, the Committee for the Reconstruction of the Tadeusz Kościuszko Monument was set up. The theme of the figure will reappear and, finally, it was decided to restore the monument in pre-war form. Mieczysław Lubelski was invited to make a copy even though he resided in Britain. Due to his advanced age, the sculptors of Łódź - Antoni Biłas and Elwira and Jerzy Mazurczyków helped him.

The artwork was overseen by the Artistic Committee of the Ministry of Culture and Art, which issued a permit to begin work on June 2, 1959.

The monument was unveiled on July 21, 1960, the eve of the national holiday of the Polish People’s Republic.
Monument to Leon Schiller (1982)

Leon Schiller (1887-1954), a theatre director, a critic and theoretician. Schiller was the rector of the school (then National School of Theatre) between 1946-1949. In 1955, the National Higher School of Film, Television and Theatre was given his name. The 3-metre tall monument of Schiller designed by the sculptor Antoni Biłas, commemorates the Master. It was revealed on 27th March 1982 celebrating the International Day of Theatre.

The Walk of Fame (1998)

It consists of a set of bronze stars on the floor in the style of the Hollywood Walk of Fame. It is dedicated to recognizing great Polish artists from the entertainment world, especially from the world of cinema, since Lodz became the centre of Polish film production and headquarters of the National Film School. The city’s film credentials were given a top class nod in 2017 with Łódź being added to the UNESCO Creative Cities Network as a City of Film. Walk of fame was designed by Andrzej Pągowski in 1998.

It is a project by Marcel Szytenchelm, actor and director. The idea was to take the form of statues on Piotrkowska, dedicated to the great and good of (what was then) Poland’s second city (when the programme started, today the third).

So far the following sculptures have been placed

1999 Julian Tuwim’s Bench work by the sculptor Wojciech Gryniewicz, came up with a cast-bronze figure of the literary hero Julian Tuwim. Unveiled on April 10, 1999, it was a roaring success, with the bench Tuwim is sat on becoming a popular meeting spot for canoodling couples.
2000 Artur Rubinstein piano

2001 Władysław Reymont’s Trunk work by the sculptor Robert Sobocinski
2002 The Industrialists work by the sculptor Robert Sobocinski, a statue of Izrael Poznański, Karol Scheibler and Ludwik Grohman seated around a table signing an agreement.

2006 Jaracz’s Chair
Robert Sobocinski?
2007 The Lamp Man. Weighing more than a 2007 tonne the monument was unveiled to coincide with the 100th anniversary of the first electric streetlight to appear in the city. Replacing the old gas fired street lamps, Łódź’s first electric light was once found on this very spot, right outside what was in those days regarded as the most exclusive shop in town – the American ‘Diamant Palace.’

Lodz Citizens of Millennium Change (2000?)

Between 1993-1997 one part of the street traffic was excluded and a part of the street was paved with black cobblestones imitating the old pavement. From 1995 the street cobblestones were gradually replaced by the new ones, which were greyer in colour and much more solid. That created a perfect opportunity to build the monument Lodz Citizens of the Millennium, which is a nominal surface covering the part of Piotrkowska Street. This is probably the only monument of this kind in the world, consisting of 13,454 nominal cobblestones.
**Piotrkowska Monolith (2008)**

“Piotrkowska Street Monolith” (2008) to celebrate the 185th anniversary of the Piotrkowski Route being transformed into street, this 185 cm high obelisk was erected. Every year it will increase by one centimetre. We oblige the next generation of Łódź residents to continue this idea as a symbol for the tradition of Piotrkowska Street. Idea and design – Marek Janiak. President of the Piotrkowska Street Foundation.

---

**Uszatka Bear Statue (2009)**

Generations of Poles grew up in bedtime stories about Misiek Uszatku, Misola Colargol and Enchanted Pencils. They were all created in Łódź. Animated films have been created in the studio “Se-ma-fora” continuously for 70 years, for both children and adults. Two Oscars productions were even awarded! The background of cartoons and movie sets can be seen at the Museum of Cinematography.

Łódź’s Fairy Tale (2009–2018) is a series of sculptures created with Magdalena Walczak defining a tourist trail dedicated to children and
Piotrkowska’s Fountains⁴

As part of the “Sources for Łód” program, a specific project for the street was proposed in 2009. The authors of the sculptures are Magdalena Walczak and Marcin Mielczarek, and the architectural concept was developed by Krzysztof Wardecki. The project contractor is Water Supply and Sewerage Plant, Łódź.

There are four fountains distributed along the street that take as their motif images of children and fish.

Works in the vertical plane of Public Space

Łódź has been called “The Polish Manchester” in reference to the importance of the textile industry; “The City of Four Cultures” in reference to the meeting of Polish, German, Jewish and Russian culture. “The Capital of Polish Cinematography” in reference, as we have seen, to being the seat of the Polish film industry or “The Promised Land” in reference to the film of the same name directed by Andrzej Wajda in 1975.

Being in the city, after a few minutes walking through, we did not perceive a relationship with the four previous denominations and there is no other option but to label it as “The city of walls”. A few minutes later, this name will change to “The city of murals”. In the central part of the city there are many urban voids that reveal a multitude of party walls. In the areas of urban growth in residential estates, large blind walls have been prioritized on the sides of the blocks. In the centre these walls produce a feeling of neglect and abandonment. Some of them are used as support for billboards. Others are intervened with murals. Urban Forms, a cultural foundation, is responsible for developing the mural project. Urban Forms Foundation was created in 2009 by art historian Michał Bieżyński and actress Teresa Latuszewska-Syrda⁵.

The history of the Urban Forms Foundation is slightly longer and more complicated. In 2008, Teresa Latuszewska-Syrda established the Street Art Support Foundation “Outline”. Then in 2009, on her initiative, the concept of the gallery called the Zachodnia Gallery was formally presented to representatives of the City Hall and the City Council. Soon the concept was changed as a result of the administrative decision to demolish some buildings along Zachodnia and Kościuszki — the street that was to be the location of the gallery. A new concept of the gallery located in the wider centre of the city was named the Urban Forms Gallery. Since 2011, the Foundation has operated as the Urban Forms Foundation, headed

---

4.-Writing from Barcelona, I cannot fail to mention - let no one be bothered- the fact that the fountain programs, with realistic and “kind” sculptural figurations (children, animals, story characters) are not new. For example, in Barcelona, between 1912 and 1917 a font program was developed for the Ensanche. Program that will be repeated in the 1920s, and even for the 1992 Olympic Games, the “Olympic Fountains” program (1994) was implemented with sculptures of boys in the attitude of practicing a sport.

5.- As Teresa Latuszewska-Syrda, director of the Foundation, explains “We focus on broadly defined city culture and on organizing, promoting and supporting independent artistic initiatives in public space. We want to change city space by raising its quality and aesthetics. We see artistic activities as important tools in education and social revitalization. We want to promote “living” culture and art, direct them towards people and make it possible for them to take an active part in organized events. We propagate every activity that aims at revitalizing our city and county as well as the whole country through artistic creativity... Our fundamental mission is to saturate the cityscape with creative, multi-layered and modern art that would improve the current image of Lodz, giving it a truly artistic and original value. The main tool to reach our aim is large format painting done directly on the side elevations of buildings. The reason is that it changes the appearance of a given space permanently... Urban Forms Gallery is the main project of the foundation. It is a permanent street art exhibition in public space of Lodz”.

---
Since then, through urban art festivals, they have implemented 78 murals that make up the Urban Art Gallery. Some in the Piotrkowa Street regeneration process area, most in the Nowe Centrum Łodzi regeneration zone.

6.- Urban Forms also develops participatory workshops within the participation strategy of the different processes of Urban Regeneration. At the request of the city, Urban Forms implements the Social Participation Program related to the revitalization process. The activities have as an objective not only to inform the residents about the next changes, but also to obtain information and donate their support to the activities. Urban Forms manages also creative workshops for children and schools, guided tours to value the murals. OFF Gallery it is a program that relates works from the collection of the City’s Museum with mural reinterpretations in public space.
Łódź "city of walls"
Łódź “city of murals”
Łódź in a nutshell „Łódź w pigułce” (2000)

Fresque des Lyonnais (1992)

Balconies of Barcelona (1992)

both by Cité de la Creation
The idea of painting such a large fresco was born in 1996. It is modelled on similar paintings on the walls, among others Lyon, Barcelona, Rome. The mural was created from August 28 to November 3, 2000. The author of the project is Krzysztof Jaśkiewicz.

The fresco imitates the wall of the building with balconies, windows and shops, in which 31 of the most famous and distinguished figures for Łódź appeared. This list was selected as a result of the competition “And you can go down in history” organized by the city architect Piotr Biliński and the Łódź branch of Gazeta Wyborcza. The final selection of 130 candidates for the mural was made by a jury to which the rectors of the universities of Łódź were invited. The mural is completed by the figures of the weaver from Łódź, the anonymous Jew and Lila Fontelli, a street singer.

The Polish Students’ Association was founded in April 1950 in Warsaw. The decision to form the organization was taken by the Congress of Polish Students meeting in the auditorium of the Warsaw University of Technology on April 16, 1950.

**Kolorowa Tolerancja - Łódź zwycięska (Victorious Łódź) 2001**

Colorful Tolerance is a cyclical festival conducted in Łódź since 2000. It aims to oppose intolerance, xenophobia and vandalism. Every year, schoolchildren, students, journalists, politicians, civil servants and numerous non-governmental organizations take part in the campaign. During “Colorful Tolerance”, insulting inscriptions on the walls are painted over.
The initiator of “Colorful Tolerance” is Joanna Podolska, journalist of the Łódź editorial office of “Gazeta Wyborcza”. It is organized by the Tolerance Institute Association which operates in Łódź.

At the 2000 festival, the idea of painting a large mural appeared in the last building in northern Piotrkowsca. The idea for this painting of 600 square meters, was approved in August 2001. Work on it started in September, and the whole project was completed on November. Initially the mural was designed under a working title “Łódź Victorious,” showing a ship sailing on the ocean shortly after winning a battle with another, already sinking, Łódź. This idea, however, was modified, as initially seen as not urban enough, with too few elements typically associated with Piotrkowska Street. Thus, the design was changed by introducing representative elements of the street.

The authors of the giant mural are members of Design Futura. When finished in 2001, it was the largest mural in the world at the time, and today remains among the largest graffiti murals in Europe. It entered the Guinness Book of Records and for a time was the largest graffiti in the world.

---

7. Łódź in Polish means “ship” and therefore the city coat of arms is an example of talking arms, as it represents a ship (łódź), which alludes to the name of the city.
Untitled (2001?)

The party wall on which the mural was painted belongs to the “House of Bechtold” designed by Wolf Szereszewski and built for Ryszard Bechtold before the First World War.

The other party wall opens to Marszałka Józefa Piłsudskiego Avenue. This party wall is also decorated with a mural “trompe l’œil” with current characters and others, dressed in 30s USA fashion. All current characters speak on the cell phone. This mural shares “times” with large commercials.

Passage Rózy (2014)

The passage Rózy by Joanna Rajkowska was created in 2013-2014 as part of the Lodz Czterech Kultur festival with the support of the Mia 100 Kamienic program; Academy of Fine Arts (porf. Zdzisłowi Olenjniczakowi), Institute of Philosophy of the Lodz University (dr. Wioletta Kazimierska-Jerzyk).

The first time I saw it, I immediately thought of the “Quixote”, specifically in the “Knight of the mirrors” that the bachelor Sansón Carrasco incarnated.

As the author comments on her blog:

Pasaż Róży, as the title of the project for the city of Łódź and as a phrase, has two meanings for me. On the one hand, it is a reference to the location of the project - a narrow yard at the back of the tenement house at ul. Piotrkowska 3. This yard will become a passage, crossing to ul. West, where life from Piotrkowska escapes towards the Manufaktura complex. It is the idea of building a special place - a road, and thus redirecting human presence and attention. On the other hand, Rose Passage illustrates the path that passed my daughter.

8.- By definition, the “City of tenement houses” program improves the living conditions of the residents of the properties covered by the program, i.e. thermomodernization (replacement of window and door joinery, insulation of roof and external walls), replacement or strengthening of ceilings, liquidation of shared toilets located outside the premises and often outside the building, renovation of facades, gate clearances and staircases, conservation works inside buildings entered in the register and register of monuments, insulation, connection to the system heat system, modernization of plumbing and electricity installations, development of public space in real estate - new yard surface, organization of greenery in real estate.
Rose, from not seeing to - view.
The artist’s intention is to keep the viewer on the level of enchantment with the mere possibility of seeing. The architectural skin of the outbuildings at the Polski Hotel is nothing but volleyball, a photosensitive instrument with which the eyes are equipped. The fact that a shift by a millimeter generates a completely different reflection in a mirror mosaic relativizes the concept of image, makes it obvious that our dependence on the possibilities of the eye, reference point, possible perspective.

Obviously, “Pasaż Róży” has its architectural dimension. The monumental mosaic of cut mirrors, laid on the facades of outbuildings is, according to Rajkowska herself, an attempt to visually dematerialize the body - an attempt to overcome the weight, scale, and enormity of the building. “The bouncing fragments of the environment, the sky, the huge amount of light that appeared in this quite dark yard, were to make this place something very light, shimmering, surreal.”

An equally important factor was the choice of place. Creating a communication route between ulica Zachodnia and Piotrkowska is to help direct traffic towards the latter, which is the heart of the city. Therefore, “Pasaż Różó” is also an interference with the living urban tissue, an attempt not only to direct thinking, but also to direct human steps.

The building at Piotrkowska 3 houses the oldest hotel in Łódź, which dates back to the mid-nineteenth century. Abandoned at the beginning of the 20th century, after World War II, it became a municipal tenement house. It is still today. (Joanna Rajkowska 2014)
Untitled (2018)

In 2018, a large hollow wall in the Schiller Passage, one of the pedestrian streets coming out of Piotrkowska, has become a mural that has aroused huge controversy since its inception. The painting, made by the company Good Looking Studio specializing in advertising, combines two forms: an artistic reference to the terraced house where it is located and its history, as well as the advertising part located in its central part. The mural presents the façade of the building stylized as the original, as well as the building that previously housed the Atlas Sztuki Gallery. In addition, in the central part there is a cinema room with screen, which serves as advertising. Signs of historic service premises located in the building and film posters from the early 20th century were also restored. In the stylized ticket window, we can see a nice old woman: the grandmother of the current owner of the building and the originator of the controversial mural.

Two examples of public (temporary) art in the air plane

The following two works are not part of the interventions on Piotrowska Street, but they are part of the Urban Regeneration area of the Centre of Łódź. Installed in Old Market Square about 500m from the start of the street and on the edge of the old Litzmanstadt ghetto. They are a good example of how the airplane can be used for artistic interventions ... even if they are temporary.

Ribbon Concerto. Installation on the Old Market in Łódź (2016)

In August 2016, Jerzy Janiszewski revived the space of the Old Market Square again. In the installation’s colours referred to Łódź as an avant-garde city, which is a reference to the avant-
garde century celebrated this year. It is also a reference to Łódź as a place where patterned fabrics are produced and to the tradition of Łódź design. Ribbons as graphic elements set in motion, create thousands of combinations, suggest changes and transformations. Ribbons live their lives just as a metaphor of a city that is both permanent and changeable. The installation was part

**Untitled. Installation on the Old Market in Łódź (2017)**

The infrastructure used for “Ribbon Concerto 2” was used again the following year within the framework of the X Łódź Four Cultures Festival.

Robert Rumas designed this intervention with phrases from “Polish Flowers” by Julian Tuwim, Nobel Prize in Literature.

---

When architecture produces Public Art. The zenith plane of the public space

If there are not many examples of the use of the air plane, we will find less of the “aestheticization” of the zenith plane. Possibly one of the best known interventions is that by Enric Miralles and Bernadetta Tagliabue on the roof of the remodelled Santa Catarina market (1997-2005) in Barcelona. The undulating architectural design benefits from the good work of the ceramicist Toni Comella. A sea of colour spreads across the deck, reproducing the sensations we experience inside the market, in which the exhibition of fruits, meat, fish, and vegetables at the respective stalls, immerse us in a universe of colour, textures and smells. The beneficiaries of this landscape, the residents on the upper floors of the houses that surround the market.

The colour universe of the Barcelona market is visible if we place ourselves “eagle eye” or, in film terminology, using aerial shots. In Łódź the situation is the reverse – low angle shots- we must raise our eyes to the sky to appreciate the soft and colourful hues of the Piotrowska Centrum Shelter, a large tram station where several lines converge and allow you to switch between them.
Piotrowska Centrum Shelter (2015)

The author of the shelter is architect Jan Galecki. The station is inspired by the architecture of the Art Nouveau, which is a historic element of the city. The shed over the four platforms of the stop is characterized by soaring white pillars. The roof, created from a transparent EFTE membrane⁹, imitates the stained-glass technique in blue, yellow, purple and red, associated with the colours of the new Łódź logo as a creative city. The side walls are made of plastic and a membrane. For safety reasons, the use of glass was abandoned. Before the material produced in Japan with a total area of 3000 square meters reached Lodz, it was coloured in Italy - it is the world’s largest roof of the building made in this technology.

⁹- ETFE is copolymer, of ethylene and tetrafluoroethylene. It’s refined from seawater which include 25% ethylene and 75% tetrafluoroethylene. It belongs to PTFE fluorine polymer. It shows the excellent features, and is used in various applications. The durable film is highly transparent and very lightweight in comparison to glass structures. In fact, ETFE film generates 95% of the same light as glass, but weights just 1% its weight. In two or more layers, a pneumatic cushion (ETFE cushion) is created that is then attached using aluminium extrusions and supported by a lightweight structure. These cushions are filled with low-pressure air, providing thermal insulation and structural stability against wind or snow loads. If needed, small cables can be used for additional tensioning and support. Under typical loading conditions, ETFE cushions can range from 5 to 15 feet wide and reach up to 200 feet in length. ETFE is printable, it has self-cleaning because of very good anti-adhesive surface properties and it is complete recyclable. Long life of more than 30 years.
Conclusion

In general, the public space is composed, ordered and maintained according to its use and social perception. This is what we can call “orderly public space”, that is, conceived as a whole and contemplating everything that constitutes it, from ground treatment to architectural surroundings, furniture and urban furniture to urban afforestation. Piotrowska design manages to give this feeling of ordered public space.

But, specially in the central city, this does not mean working with mimetic criteria or interpreting the decisions of yesteryear. On the contrary, with regard to urban furniture, solutions of contemporary design are preferable to solutions based on classic and historical forms, which, in most cases, become imitations that are out of character and out of place in time and space.

Historically, city centres have always been a setting for innovation in materials, public art, design and furniture repertoires. Technological evolution, understood as technical evolution and evolution in management criteria, made the city centre the first recipient of technical and design innovations. This is a value that we must preserve if we do not want our historic centres to look more like museums than cities, as happens today in many cities.

The “conservation” policies of historic centres have been misinterpreted on several occasions; while on the constructive level, conservation is possible thanks to the use of new materials or construction techniques, on the level of the urban landscape - including furniture, there is a tendency to freeze that landscape.

These actions do not take into account that the historic centres are living and lived areas of the city, especially in the historical dimension and that, trying to freeze the urban form at a certain point in its evolution, it goes against one of the fundamental characteristics of the centre. It is therefore not lawful to freeze the evolution of urban form in temporal points, which by definition will always be arbitrary, capable of transmitting a false image of the historic centre, unreal and out of place. For this reason, preserving the value of innovation can become a very important means of creation and management. (Remesar, A (Coord) 2005)

Piotrowska elements of urban design and public art appear old-fashioned and often kitsch. Some elements of street furniture are practically replicas of those that Davioud designed for Haussmann’s Paris (Alphand, Adolphe 1867). The majority of public art reproduces figuration schemes that in many other cities were abandoned as early as the mid-1990s, but at least they retain a materiality appropriate to the public space, not like in other cities where polyester resin has replaced to bronze.

In Piotrkowsa public art, the objective was to get “works close to people”: they can be touched, hugged ... but the most normal thing is that they serve tourists to take a photograph. Other elements, such as the Walk of Fame, are excessively oriented to the aspects of city promotion or urban marketing, despite the relevance that the performing and cinema arts have had and
Waiting for our love Mosaic
have in the city. The model used, Hollywood, is closer to the show than to the maintenance of remembrance and identity of the city.

In a city overflowing with dividing walls, “City of Walls”, the possibilities of architectural design and the use of materials have not been sufficiently explored to achieve the proposed objectives: to improve both the living conditions of the houses and improve the visual aesthetics from the environment.

Except for honourable exceptions, the commitment to murals, “City of Murals”, demonstrates an excessive attachment to the so-called “urban arts” evidencing, on the one hand, an underlying strategy centred on some topics of marginality and exclusion, and, on the other hand, the need to connect with a new “main stream” in urban decorum that is beginning to exclude the traditional performances of sculpture, replacing them with “show actions” that are part of global circuits, partly managed by the emerging industries linked to the “urban arts”, supported by public budgets and determined by a “good spirit”, quite uncritical.

This strategy does not really seem a long-term urban strategic option, unless we understand the role of public art from a purely temporary and, to a large extent, not really urban perspective. That aestheticization programs included urban regeneration and local development strategies are convenient. It is not so much that when management of these strategies is decanting the realization of works of art at the mercy of those who finance them, turning public art into corporate art, that is, marketing and advertising... or simply as part of the promotion of artists who move in a global network and for whom the intervention on the physical city represents an increase in their portfolio in the networks of Internet’s private space.
